

INTERACTIVE WEB-BASED TRAINING

Through deployment of a secure “Virtual Project Controls Office”, DRMcNatty & Associates, Inc. has developed an interactive, web-based training program, delivered by our team of Primavera Certified Senior Trainer/Consultants. Interactive web-based training curriculum is identical to that of Primavera lab based courses while drastically reducing the time and cost associated with traditional classroom training. Attending a certified course in a virtual environment increases your return on investment and speed to market while maintaining a high-touch, real-time, connection with a Senior Primavera Trainer.

Combining world-class technology, Certified Instructors, cutting-edge curriculum, and hands-on labs, we offer an exciting combination of traditional content and interactive learning.

DRMcNatty & Associates, Inc. founded in 1989, has been using internet technology to support clients worldwide since 1996. Our mission is to apply the best available technology to help you efficiently solve your business problems quickly and efficiently.

HOW DOES IT WORK?

A CASE STUDY

URS has been a long standing customer of DRMcNatty & Associates, Inc. for over 15 years. We were contacted to assist the Client with training on a recent implementation of Primavera v6 and Contract Manager. Specifically, the Client wanted direction on the administrative set-up and configuration of both Primavera programs in an effort to standardize data entry early in the project life-cycle. A list of training deliverables was shared with our professional services team to identify the scope of work.

Within 24 hours, Jon McNatty engaged the Client and coordinated a web-based training engagement to meet the Client's immediate needs. The flexibility of coordinating this engagement via the web, along with the cost savings in decreased travel expenses, has resulted in the on-going delivery of web-based training to numerous URS offices in the California area.

"We had a database in place with P6 and Contract Manager. We had been testing and digging around in the software to get more familiar with some of the menus and were ready to begin training with our own database. We wanted to schedule an 8 hour training session, focused on project setup, more so for the administrators of the project."

"Once we went over what our needs were, we decided to use DRMcNatty & Associates Web-Based Training Program. Our investment in 8 hours of web based training was near the equivalent of what the travel expenses would have been for a Consultant site visit."

"We had the luxury of operating within our secure hosted environment, providing training on authentic project data as opposed to traditional "workshops. Our team was able to apply the material discussed immediately, contributing to the successful deployment of our project controls system."
