

CONTRACT MANAGER INTERFACE

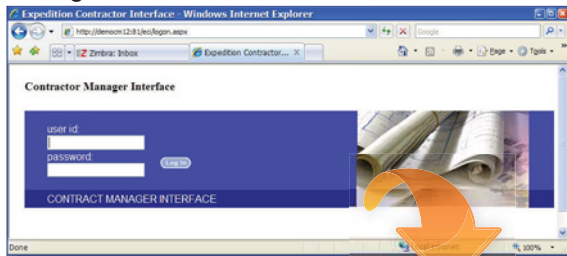

The Contract Manager Interface (CMI) was developed by DRMcNatty & Associates, Inc. to provide our clients the ability to receive RFIs, submittals, and Change Proposals (PCO) documents, with attachments, directly into the Contract Manager database. This 100% web-based (no Java runtime required) application resolves a common business pain for organizations who receive incoming documents and have to manually log them directly into Contract Manager. Contractors have the ability to submit RFIs, Submittals, and Change Proposals, all without needing extensive knowledge of the software. Additionally, CMI allows the contractor to continue to use their own document control tool to create and provide their original documents in an electronic format.

FEATURES

- Browser-based, Internet Access to Submit documents into Contract Manager
- The CMI may be configured to default most field values right from Contract Manager
- Contractors still prepare RFIs, Submittals, Proposals in their existing systems
- Contractors receive a confirmation email
- Option to notify recipient by email for submittals and proposals
- Eliminates the need for Construction Management staff to enter documents, and saves you money!
- Customized screen is developed through the Contract Manager API, and uses Contract Manager Security
- Automatic email notification and receipt

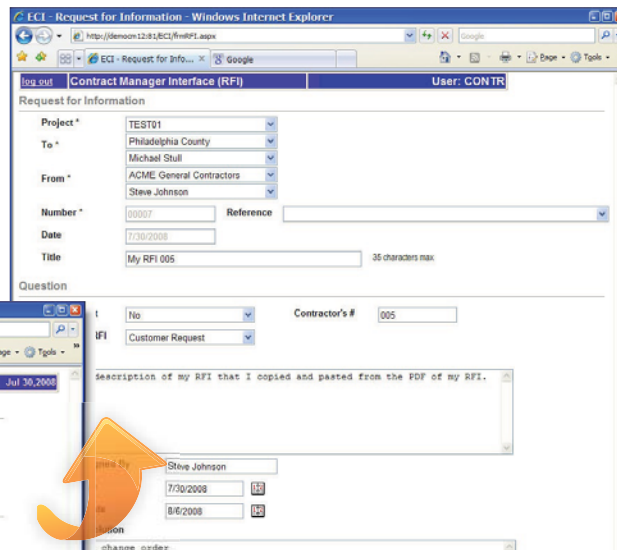

A. Log-In

B. Select a Document

C. Fill in Fields

D. Click Submit button and it's imported to Contract Manager with all attachments
