Primavera P6 Enterprise
Project Portfolio Management

Your Virtual Project Controls' Office

Through deployment of a secure "Virtual Project Controls' Office," DRMcNatty & Associates, Inc. has developed an interactive, web-based training program, delivered by our team of Primavera Certified Senior Trainer/Consultants. Our interactive web-based training curriculum is identical to Primavera lab-based courses, and drastically reduces the time and cost associated with traditional classroom training. Attending a certified course in a virtual environment increases your return on investment and speed to market while maintaining a high-touch, real-time connection with a Senior Primavera Trainer.

By combining world-class technology, Certified Instructors, cutting-edge curriculum, and hands-on labs, we offer an exciting combination of traditional content and interactive learning. DRMcNatty & Associates, Inc. was founded in 1989, and has been using internet technology to support clients worldwide since 1996. Our mission is to apply the best available technology to help you efficiently solve your business problems quickly and efficiently.

Flexible Primavera Training via the Web

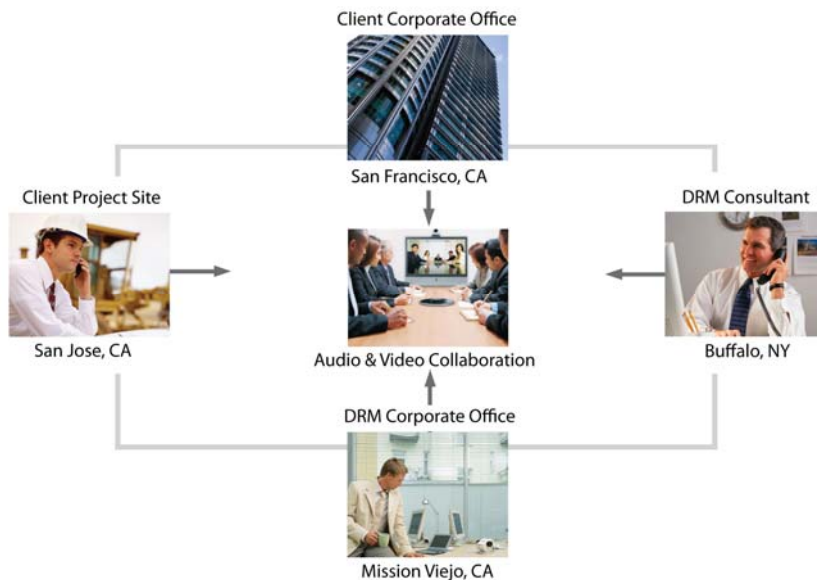

A Customer Success Story

ORACLE Gold Partner

Primavera P6 Enterprise
Project Portfolio Management

URS has been a valued customer of DRMcNatty & Associates, Inc. for over 15 years. We were contacted to assist the Client with training on a recent implementation of Primavera v6 and Contract Management. Specifically, the Client wanted direction on the administrative set-up and configuration of both Primavera programs in an effort to standardize data entry early in the project life-cycle. A list of training deliverables was shared with our professional services' team to identify the scope of work.

Within 24 hours, Jon McNatty engaged the Client and coordinated a web-based training engagement to meet the Client's immediate needs. The flexibility of coordinating this engagement via the web, along with cost savings in decreased travel expenses, has resulted in the on-going delivery of web-based training services to numerous URS offices in the California area.

"We had a database in place with P6 and Contract Management. We have been testing and digging around in the software to get more familiar with some of the menus and were ready to begin training with our own database. We wanted to schedule an 8-hour training session, focused on the project setup, more so for the administrators of the project.

Once we went over what our needs were, we decided to use DRMcNatty & Associates, Inc. Web-Based Training Program. Our investment in 8 hours of web-based training was near equivalent of what the travel expenses would have been for a Consultant site visit. We had the luxury of operating within our secure hosted environment, providing training on authentic project data as opposed to traditional workshops. Our team was able to apply the material discussed immediately, contributing to the successful deployment of our project controls' system.

Challenge

Finding a remote solution to administer set-up and configuration of Primavera programs to standardize data for the project's life style.

Solution

DRMcNatty provided a "Virtual Project Controls" solution, where they were able to quickly assist through a web-based environment.

Results

Savings in time, money, and resource allocations, with an on-going delivery of web-based training services to several URS offices.
